

MTI Coating Instructions

Materials:

1760C (3200F) Hi-Purity Alumina Coating (1 Quart) - EQ-634-AL-LD

Provided with two parts -- liquid and powder

Note: MTI can pre-mixed them because they will dry up during transportation

Pre-mix:

Please prepare two containers: one for high density, one for low density

High Density

Low Density

Apply Coating:

Fill the high density one into the holes or dents on the chamber

Apply the low density one onto the surface of the filled holes or dents

It will dry up after a few hours
